

ABSTRACT OF THE DISCLOSURE

A system for dispensing at least two components of a multicomponent mass, includes a squeezing-out device (2) having a dispensing opening (4) and at least one rolling roller (3.1, 3.2) for dispensing the at least two components; a storage container (11) having flat support element (13) on which packagings of the at least two components are supported; and a spring (8.1, 8.2) for biasing the at least one rolling roller (3.1, 3.2) in a direction toward the flat support element (13) substantially perpendicular thereto.
